Leopoldo Teixeira, et. al.

Problema

Hello World SPL ...

```
public class HelloWorldSPL {  
    public static void main(String args[]) {  
        Console.print(args);  
  
        Email.print(args);  
  
        PDF.print(args);  
    }  
}
```

Console

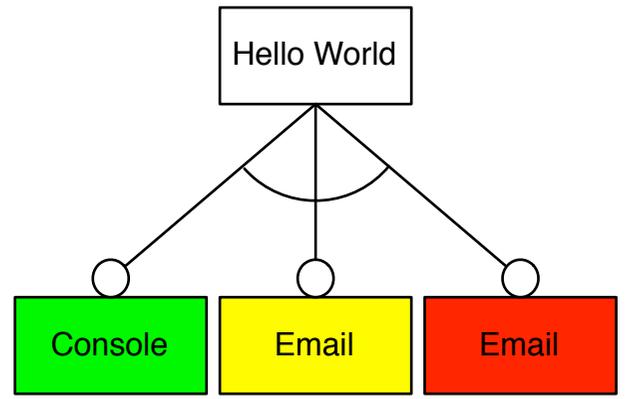

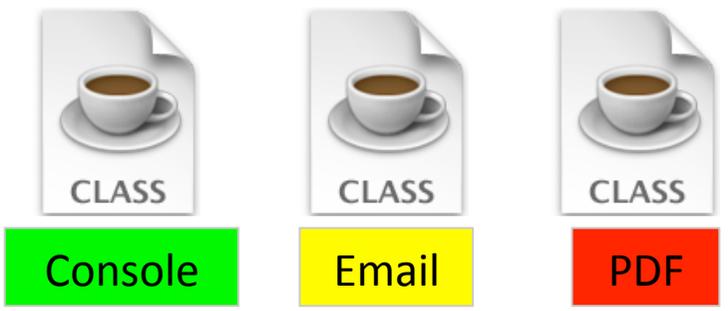

Email

PDF

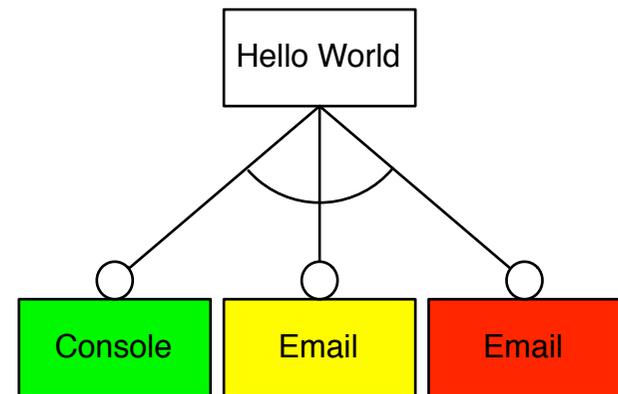

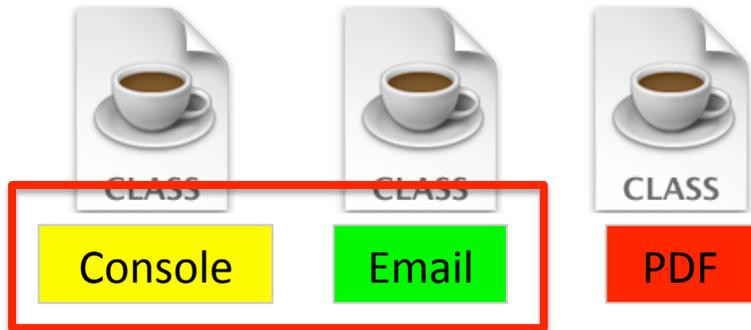

Hello World SPL ...

```
public class HelloWorldSPL {  
    public static void main(String args[]) {  
        Console.print(args);  
        Email.print(args);  
        PDF.print(args);  
    }  
}
```

Hello World SPL ...

```
public class HelloWorldSPL {  
    public static void main(String args[]) {  
        Console.print(args);  
        Email.print(args);  
        PDF.print(args);  
    }  
}
```

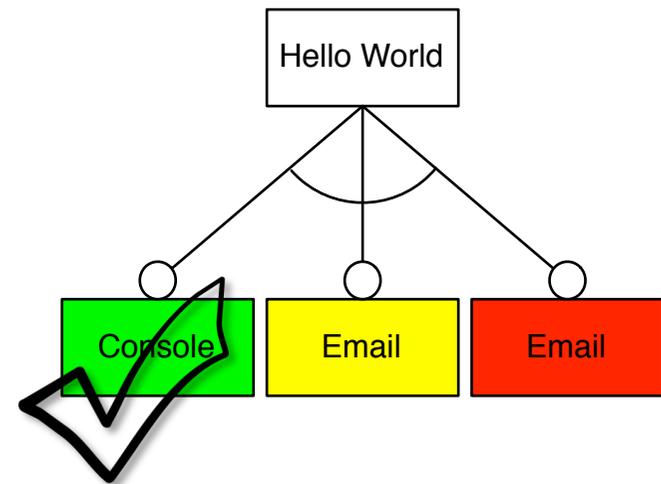

Hello World SPL ...

```
public class HelloWorldSPL {  
    public static void main(String args[]) {  
         Console.print(args);  
    }  
}
```

Email

Pode ser pior?

Spring Hello World SPL ...

```
public class HelloWorldBean {  
    public HelloWorldBean(Printer printer) { ... }  
    public static void print(String args[]) {  
        Printer.print(args);  
    }  
}
```

```
<beans>  
    <bean id="HWB" class="HelloWorldBean">  
        <constructor-args name="Printer">  
    </bean>  
  
    <bean id="Printer" class="ConsolePrinter"/>  
  
    <bean id="Printer" class="EmailPrinter"/>  
  
    <bean id="Printer" class="PDFPrinter"/>  
  
</beans>
```

ConsolePrinter

EmailPrinter

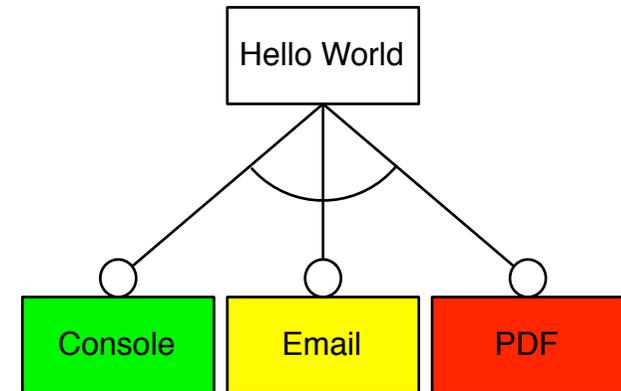

PDFPrinter

Spring Hello World SPL ...

```
public class HelloWorldBean {  
    public HelloWorldBean(Printer printer) { ... }  
    public static void print(String args[]) {  
        Printer.print(args);  
    }  
}
```

```
<beans>  
    <bean id="HWB" class="HelloWorldBean">  
        <constructor-args name="Printer">  
        </bean>  
  
    <bean id="Printer" class="ConsolePrinter"/>  
  
    <bean id="Printer" class="EmailPrinter"/>  
  
    <bean id="Printer" class="PDFPrinter"/>  
  
</beans>
```

ConsolePrinter

EmailPrinter

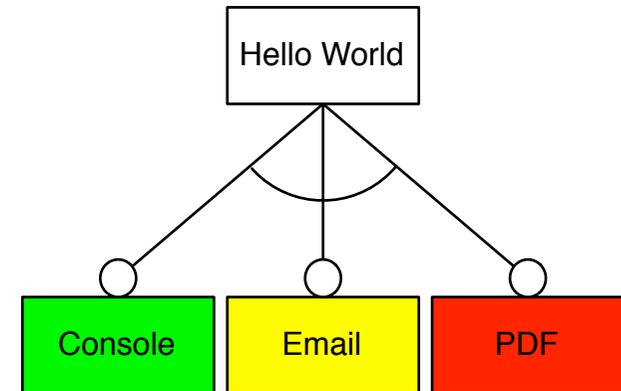

PDFPrinter

Spring Hello World SPL ...

```
public class HelloWorldBean {  
    public HelloWorldBean(Printer printer) { ... }  
    public static void print(String args[]) {  
        Printer.print(args);  
    }  
}
```

```
<beans>

      </trigger>
    </plan>
  </plans>
</agent>
```

```
public class HelloWorld extends Agent {
  public void body() {
    ✘ ConsolePrinter printer = getBeliefbase()
      .getBelief("ConsolePrinter").getFact();
  }
}
```

Solução

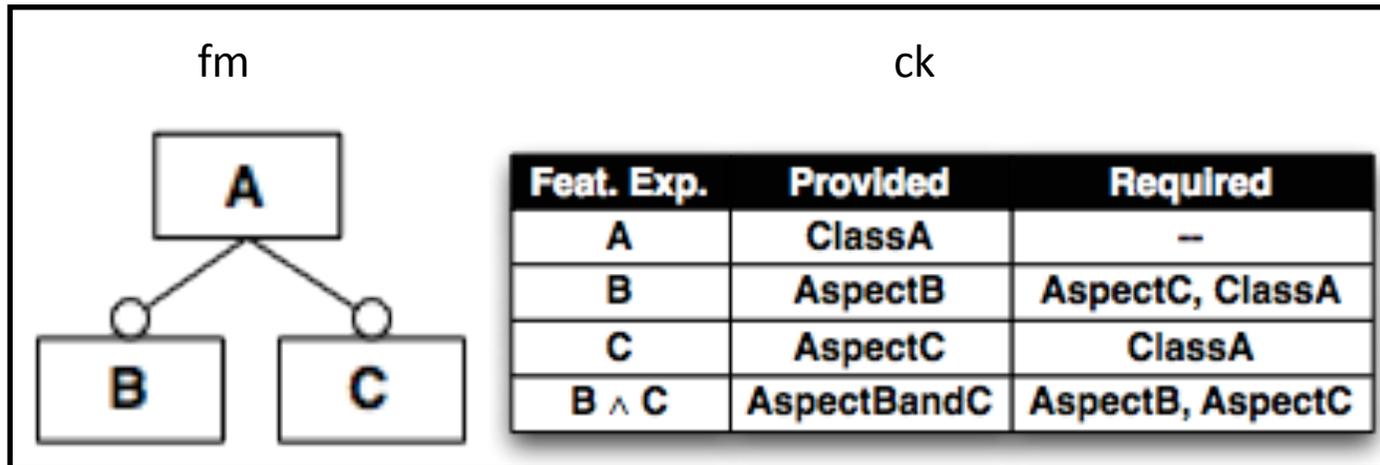

Solução ...

DKML ...

Solução baseada em *Provided* e *Required*

$\forall \text{ product} \in [[\text{fm}]] \mid$
 $\text{required}(\text{product}, \text{ck}) \subseteq \text{provided}(\text{product}, \text{ck})$

$\text{semanticsFM} \Rightarrow \text{constraintsCK}$

Solução baseada em Constraint Programming...

- Conjunto de Variáveis cujo o valor pode ser definido dentro de um domínio
- Conjunto de Constraints
- Solução
 - Atribuição de valores as variáveis obedecendo todas as constraints ...

Definição dos modelos ...

- **Feature Model:**
 - set of features F
- **Architecture Model:**
 - set of model elements E_i
- **Domain Knowledge Model**
 - set of model elements E_a
 - and a set of relation $R_a \subseteq E_a \times E_a$ and $R_i \subseteq E_i \times E_i$
- **Configuration Model**
 - set of $R_C \subseteq F_E \times E_A \cup E_i$

Variáveis ...

- set of variables V where each variable $v \in V$ represents a feature $f \in F$.
- set of variables M representing elements E_A
- And variables $a \in A$ represent elements from the set E_i

Constraints ...

- Mapeamentos de **Features** para **Assets**
 - $(b = 1) \Leftrightarrow (w = 1)$
- Relação entre elementos do **Espaço Solução**
 - *Realization* - $(m_{eA} = 1) \Leftrightarrow (a_{el} = 1)$
 - *Hierarchical* - $(m_{eA} = 1) \Leftrightarrow (a_{el} = 1)$
 - *Referential* - $(m_{eA} = 1) \Leftrightarrow (a_{el} = 1)$
