

How to Run RGMS Products

-Unzip the folder hsqldb-2.2.5.zip in a directory with saving permissions.

-Go to hsqldb-2.2.5\hsqldb\bin and run runManagerSwing.bat. The following screen appears:

Set database parameters as follows (URL field should contain the path chosen to the database with '/' as indicated) below. Leave the password blank.

Setting Name: banco

Type: HSQL Database Engine Standalone

Driver: org.hsqldb.jdbcDriver

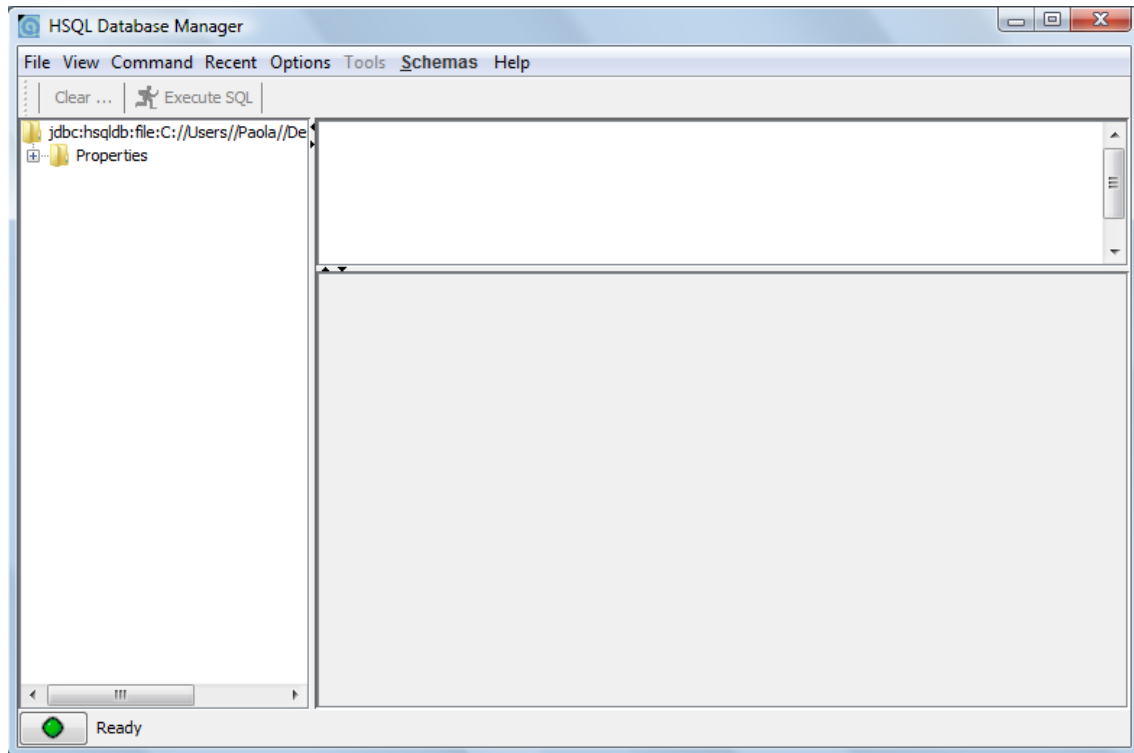

URL: jdbc:hsqldb:file:C://Users//Paola//Desktop//Material//Banco

User: SA

Password:

-Click Ok

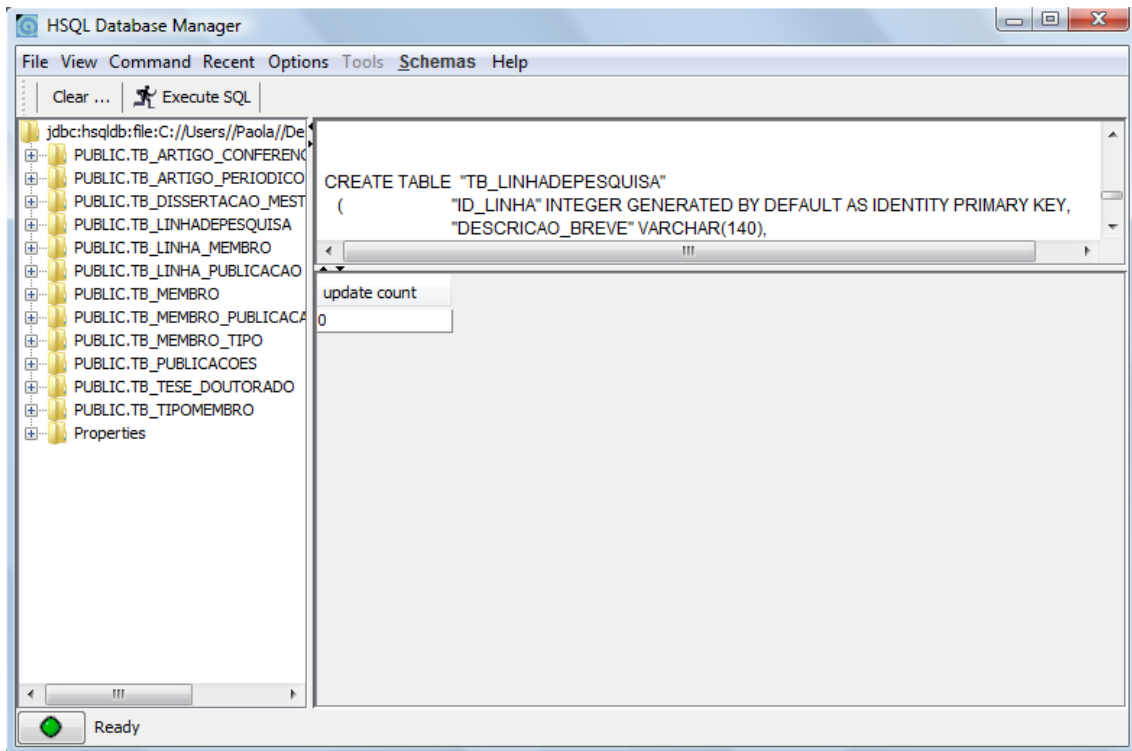

-The following screen appears:

- File ->Open Script

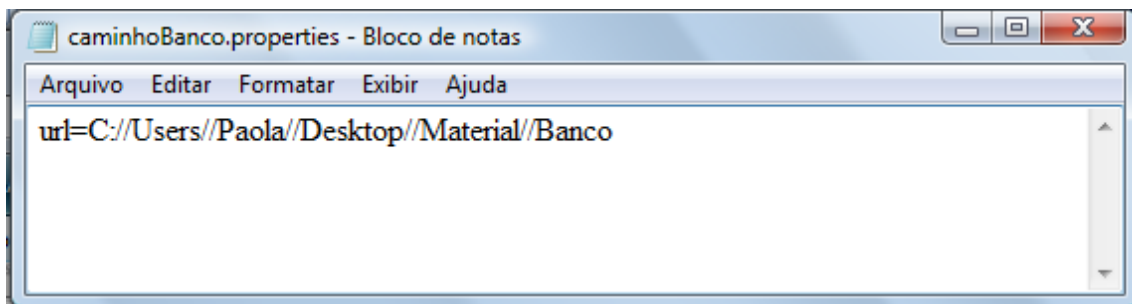

-Select script hsqldb.txt in the folder RGMS Products and open.

-Press Execute SQL to create database table. The screen should appear as follow:

-Close the database manager

-Go to P1 folder, open caminhoBanco.properties using notepad. Use the same URL you used to set the database. Save and close this file.

-Copy and paste caminhoBanco.properties inside P2 folder

-Run P1 and P2.
