1 Scenario SC01

1.1 Description:

This scenario allows the home owner to register new inhabitants. In this way, the policies for getting access in the home are applied.

1.2 Flow of events

Code	Feature	User Action	System Response
SC01.01	-	The home owner selects the register inhabitant option in the security configuration menu.	The inhabitant personal form is displayed.
SC01.02	-	The home owner selects the proceed option.	The system asks the home owner her configuration password.
SC01.03	-	The home owner fills in the configuration password and selects the proceed option.	The system register the new inhabitant, allowing she to get access to the smart house.

2 Scenario SC02

2.1 Description:

This scenario allows a registered inhabitant to enter into the house.

2.2 Flow of events

Code	Feature	User Action	System Response
SC02.01	-	The inhabitant request access to the home at the main entrance.	The system requests to the user to pass the smart card
SC02.02	-	The inhabitant inserts the smart card into the card reader.	The system asks the inhabitant's password, in order to authorize her access to the smart home.
SC02.03	-	The inhabitant informs her password.	The system verifies that the password is valid for the registered inhabitant.

3 Scenario SC03

3.1 Description:

This scenario allows a guest to enter into the house, but there is no resident there. This scenario is useful, for example, when the home owner family is traveling but an employee, a relative or a closer friend needs access to the house.

3.2 Flow of events

Code	Feature	User Action	System Response
SC03.01	-	The guest request access to the home at the main entrance.	The system asks the guest name and the reason for requesting access to the house
SC03.02	-	The guest fills in the requested information.	The system takes a guest photograph and sends one message to the home owner mobile device.
SC03.03	-	-	The system asks for the guest to wait a few minutes.
SC03.04	-	The home sends an authorization allowing the guest to enter into the house.	The system receives the authorization message.

4 Scenario SC04

4.1 Description:

This scenario describes the behavior that is triggered when an event of attempting to intrude the house is detected.

4.2 Flow of events

Code	Feature	User Action	System Response
SC04.01	-	The presence sensor identifies that someone (or something) is trying to intrude into the smart home. This might be deduced by observing any suspect event (forcing or braking) in the external doors and windows	The system emits the configured internal sound alarm.
SC04.02	-	-	The system places a call to the police department.

5 Scenario SC05

5.1 Description:

This scenario describes the behavior that have to be triggered when an event that might characterizes fire or smoke in the smart home is detected.

5.2 Flow of events

Code	Feature	User Action	System Response
SC05.01	-	The fire sensor identifies a possible fire occurrence (based on smoke or temperature variation).	The system emits the configured internal sound alarm.
SC05.02	-	-	The system places a call to the fire guard department.

6 Scenario ADV01

6.1 Description:

after infrom password or finger

6.2 Pointcut:

SC02.03
